

Cutting through the noise and doing business smarter for **Agriculture**

Itec provides outlying agricultural locations with high-speed internet connectivity that enables them to connect with their head office or cloud-based systems. Even in very remote regions, existing customers report a vast improvement on their previous satellite or open spectrum solutions.

REQUIREMENTS

RELIABLE, HIGH-SPEED BANDWIDTH

The agricultural industry often faces connectivity challenges as the facilities are based in outlying areas. They require fast connection speed to link up to their Head Office or cloud-based solution such as SAP, Pastel or Office 365. Traditionally, these locations would connect via open spectrum access or satellite, but neither of these options offer the required bandwidth.

ITEC'S SOLUTION

REMOTE ROLL-OUT OF HIGH-SPEED CONNECTIVITY

Itec customises a solution per location from a range of options from our connectivity service providers. We provide high-speed connectivity even in very remote regions. A number of our existing customers have given excellent feedback on the solution, compared to what they had before.

Itec provides high-speed, dedicated access backed by a SLA which ensures uptime and availability on the link. This successfully addresses one of the main concerns of customers in this industry, who have traditionally had unreliable connectivity.

AGRICULTURE SOLUTIONS RELIABLE, HIGH-SPEED CONNECTIVITY

In the agricultural sector, there is a consistent, urgent need for reliable internet connectivity that matches the bandwidth requirements of the systems they are running.

COUNTRY BIRD HOLDINGS

This customer is the biggest supplier of chicken to KFC and Chicken Licken. Itec is currently managing their 14-site MPLS that stretches across the country over seven provinces. Their farms are in very remote locations, but we have been able to provide high-speed connectivity to all sites to run their voice, hosted PBX, and all their data requirements.

- Voice and Data Connectivity (fibre, microwave, LTE)
- IP65-rated Equipment: Robust, -25 deg operating, moisture and dust proof
- Wireless Infrastructure: Robust WiFi, DECT, GSM and leaky-feeder-systems
- Cloud Storage and Management: centralised infrastructure, always available – secure, compliant, business continuity, resilient, redundant and disaster recoverable
- Integration and Automation: Integration into back-end systems (i.e. CRM/ERP...) to automate & 'enhanced efficient' business processes
- Cost Management and Reduction: Avoid 'double data' and reduce business expenditure (voice, data, travel)
- Connected workforce with simplified (ease-of-use) electronic communications (voice, video, content, instant messaging, conferencing)
- 'Future-proof' Investments: OPX vs CPX, defined TCO & ROI (SaaS, UCaaS)
- Maintenance and Support: National footprint, centralised CSOC (centralised service operations center) – one contact, one invoice

SOFTWARE AND SOLUTIONS

PRINT DIRECTOR

PD tracks printing per user, providing them with print-release authentication, ensuring sensitive information is printed securely.

POD WORKFLOW

Itec offers a solution to ensure that Invoices are matched to POD's. This shows all invoices generated in the accounting system that are missing POD's, thereby keeping track of debtors.

SUPPLIER PAYMENT WORKFLOW

Customers can keep track of supplier payments and ensure accountability within users, from receiving a supplier quote, up until payment.
