

INNOVATIONS FOR A SMART & SECURE WORLD

Hikvision is an IoT solution provider with video as its core competency.

KEY TECHNOLOGIES

ColourVu

Hikvision's industry-leading ColorVu technology captures high-quality, full-color video 24/7 so your security staff can protect people and property at night with the same sharp rendering as in daylight.

NON-CONTACT DEVICES

Hikvision is dedicated to creating professional protection solutions for the mass market. Our non-contact devices offer superior recognition in any environment providing top level security which is easy to manage and operate.

Acusense

Hikvision AcuSense technology helps you take security to the next level with accurate, real-time threat detection that distinguishes people and vehicles from other targets.

ANPR

Automatic Number Plate Recognition enables you to read license plates and even determine the make and color of a vehicle. This provides valuable data when managing a car parking facility, whether for public or private use.

CONTROL CENTRES

A control centre provides powerful management functions, including real-time video monitoring and visual alarms. The all-channel information display simplifies management and allows your team to stay on top of everything that is happening.

THERMAL

Make the invisible thermal radiation “visible” in the form of heat zone images with our thermal imaging technologies. Advantages of thermal imaging include unrivalled adaptability regardless of light and weather conditions, as well as video content analysis to detect actions such as line crossing and intrusion with high accuracy.

We aim to explore innovative ways to better perceive and understand the world, to **empower vision for decision-makers**, and work together to **enhance safety** and **advance sustainable development** around the world.
