

# REMOTE WORKING BUSINESS CENTRE

## Mobile Working With Secure Print & Communications

Guests, residents, and conference attendees require access to a functional co-working space that includes reliable internet connectivity, printing facilities, and meeting rooms.

With our service-led approach to technology solutions, Itec can outfit an integrated business facility with functionality such as biometric access control and CCTV surveillance, secure and encrypted internet connectivity, centrally managed and access-controlled networked multifunctional printers and a range of communications services, from conferencing hardware and phone handsets, to a wireless interactive whiteboard. This technology - and much more - is available with both cloud-based and hybrid infrastructure, and as a fully outsourced, managed service.
