CONFERENCE ROOM

Smart Conferencing with Integrated Unified Communications & Collaboration

A legal firm's conference room should enable seamless flow of information via an omnichannel platform, while accommodating client meetings and internal collaboration. Unified Communications and digital displays are imperative, with a focus on POPI-compliant call recording for auditable meeting records. On-premises and cyber security protects visitors, employees, and confidential information.

Itec has a track record of seamlessly integrating technology and expertise with an ideal hybrid model of digital and paper document management. Unified Communications with video conferencing, secure WiFi, interactive whiteboards and POPI-compliant call recording and voice recognition equip conference rooms with mobile-enabled and secure omnichannel communications tools.

Secure release, cost-controlled printing and PABX calls integrate with the company's ERP system for real-time client billing. Biometric access control secures the room and its information while confidential proceedings take place.
