CONNECTED CLASSROOM

Classrooms that Connect People for Collaboration & Learning

Interactive and collaborative learning is a powerful way to educate. A connected classroom must have secure internet access and user-friendly devices and displays. On-site security is paramount for young students as they access facilitated learning tools, interact with teachers and peers and collaborate with multimedia devices and platforms.

Itec can help you build a secure, connected classroom that enables interactive learning. Follow-Me-Print protects document confidentiality and allows students and teachers to release prints at any secured network printer. Our connectivity and communications solutions include PBX IP phones and mobile apps that enable teachers to communicate regardless of location. Remote content and learning tools are shared via projectors, screens and wireless displays and accessed via firewall-secured WiFi. Interactive smartboards with the preloaded South African curriculum engage students in dynamic learning experiences. A PBX-integrated PA system enables campus-wide announcements, and CCTV dome cameras with built-in microphones enhance security by providing visual and audio surveillance within the classroom.

- Unified Communications
- Document Management
- Security & Business Intelligence
