## **IOT EDUCATION**

## RECEPTION

A Well-Managed Entry Point for People & Information

A reception area is the face of an educational institution's brand and manages the flow of people and information into and through the campus. On-site security, visitor management, and communication ensure efficient and rapid response to all visitor and student requests, making for a well-managed initial point of contact.

Itec's integrated security and communication solutions prioritise student safety and precise message delivery. Firewall-secured WiFi ensures reliable and protected internet connectivity. An IP reception console streamlines communication with staff members and parents, while the visitor management and room booking system simplifies the check-in process and optimises space usage. A PBX-integrated PA system enables efficient announcements throughout the campus, with commercial displays providing dynamic and engaging content for visitors. CCTV cameras, biometric access control and intercom systems ensure a safe and controlled environment for everyone entering the premises. A network-secured printer with Follow-Me-Print enhances document security for efficient and cost-controlled document management.
