

# HOTEL ROOM & STOCK MANAGEMENT

## Internet & voice connectivity in a business-enabled and access-controlled hotel room

Guests expect privacy in their hotel rooms, coupled with easy access to information about the venue and surrounding areas. Free WiFi is now expected, with the option for remote working if required. Housekeeping should be discreet and efficient both for the guest and for its management.

Itec can outfit connected hotel rooms with free WiFi bolstered by network redundancy, phones in both the bedroom and bathroom that allow for backbilling and a workstation that enables remote working, including a print-to-email function where printed pages can be released at reception or the business centre. Our RFID card-readers control access to the rooms for guests, and the service areas for staff who require housekeeping supplies, which can be centrally managed and inventoried via mobile devices. Guests can order room service or log queries via the customised app, or even access a map of the hotel and book any of the available activities.
