

I-SUITE DOCUMENT MANAGEMENT

Paper-based workflows can be a major obstacle to productivity, stifling innovation and creating competitive disadvantages for individuals, teams, and companies alike.

Easily enhance your document repository by capturing, classifying, and validating large volumes of files—including paper documents, PDFs, and email messages and their attachments. With our document capture automation software, you can locate what you need in seconds.

Our AWS AI-powered intelligent information management platform eliminates paper from your processes, streamlining work with automated digital workflows. We simplify your operations by extracting data from scans and PDFs, archiving documents in a searchable database, templating layout for effective OCR and creating digital twins of your current processes through intuitive graphical workflows.

ENHANCE SECURITY TO THE FULLEST

Guarantee document security with content-aware workflows and maintain audit trails through a comprehensive chain of custody.

ENSURE COMPLIANCE PROTECTION

Implement uniform business rules and data protection policies, including automatic redaction, watermarking, and rule-based printing.

SPEED WORKFLOWS & BOOST PRODUCTIVITY

Boost productivity and efficiency through document capture workflow automation. Enhance information quality, improve accuracy, and minimise error-prone manual tasks.

MANAGE DATA EFFECTIVELY & LOWER COSTS

Analytics and visualisation turn data into actionable insights, enabling you to optimise processes and lower costs.
