

## Revolutionize How You Power Your Digital Transformation With **TransformAI**

Accounts payable documents can come from a variety of sources, such as paper and PDF, but not all of these formats are conducive to digitally transforming your processes.

Capturing AP documents with templates can be highly involved, requiring the creation of additional templates for each new vendor and format change. But now, AI-assisted capture puts this method firmly in the past.

### The Limitations of Templates

- Each document from each vendor requires its own template
- These templates take time to make and require additional professional service charges
- Each time a new vendor is added or a document's format changes a new template needs to be created

### Free Your Capture Process With Help From AI

TransformAI quickly and accurately lifts information from any source without the use of templates, allowing you to:

-  **Digitize Documents** from any source, including emails, scanned images, Office Documents, and even handwritten forms.
-  **Eliminate Costs** associated with template creation for more affordable implementation and improved business scalability.
-  **Automate Extraction** by making your capture process part of a larger workflow & sharing data with other financial applications.
-  **Reduce Errors** by effortlessly extracting typically challenging data points such as headers, footers, and even line item data.
